06

Run your BMS Supervisor in the Cloud as a Neeve Managed Service

Why

Problem

Traditional BMS supervisor deployments are cumbersome to manage

Setup Takes Time: Hardware procurement, IT involvement, License procurement all take time for a fully functional BMS to be in place.

Software Maintenance Issues: BMS Supervisors deployed on building premises need to be manually managed for software updates, security patches as well as physical security

Expensive Truck Rolls: Requires vendors and system integrators to make expensive in-person visits to site for troubleshooting and configuration changes
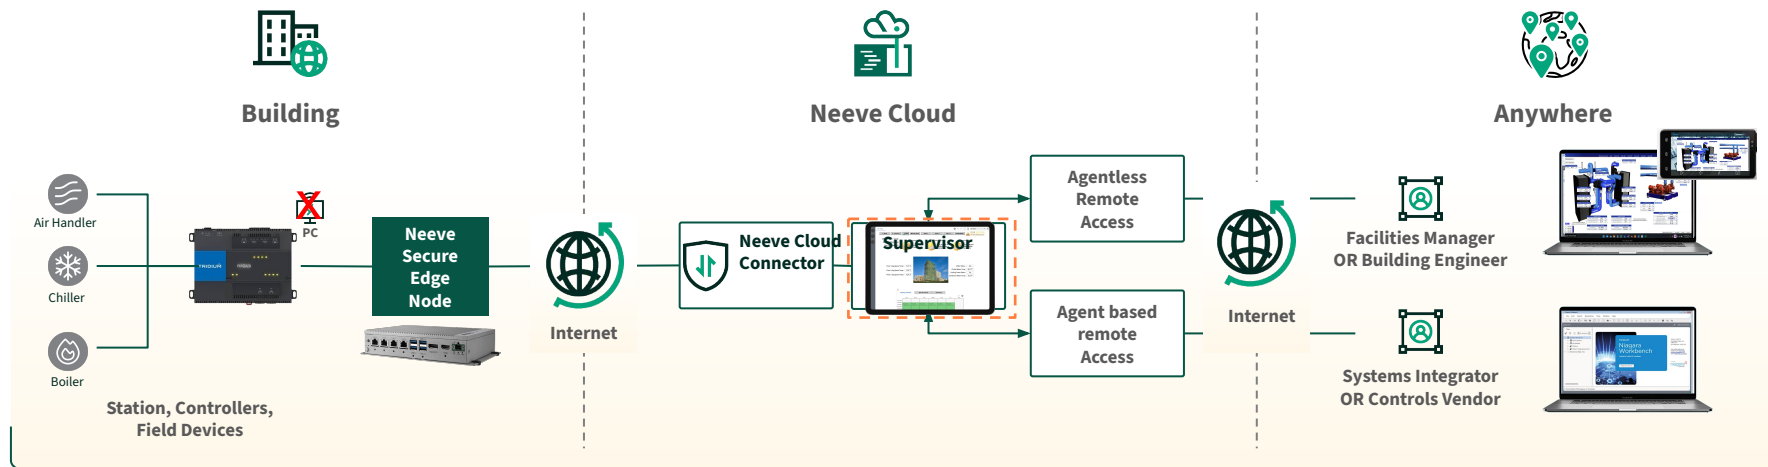

Solution

Neeve offers a cloud-based on-demand Platform-As-a-Service

Quick Spin up: your BMS supervisor in the cloud on-demand in minutes, not days. Software deployed as a managed service, licensing included

Maintenance managed by Neeve: Eliminate need for ongoing security patches, software updates, and computer hardware replacements.

Remote commissioning & Monitoring: Commission equipment remotely using Workbench or other commissioning tools running on your laptop. Access Web Graphics remotely using only a web-browser

How It Works: BMS Supervisor as a Fully Managed Cloud Service

Building

Air Handler

Chiller

Boiler

PC

Neeve Secure Edge Node

Internet

Station, Controllers, Field Devices

Neeve Cloud

Neeve Cloud Connector

Supervisor

Agentless Remote Access

Agent based remote Access

Internet

Anywhere

Facilities Manager OR Building Engineer

Systems Integrator OR Controls Vendor

Benefits

1

Agentless Remote Access
Just open a web browser, login and click on a tile to securely access Web Graphics on the Supervisor

2

Agent- based Remote Access
Install a secure client on your laptop running the Commissioning Application, and connect to the Supervisor from anywhere, create/edit stations, graphics etc.
