Oversee Web Graphics from your entire Building Portfolio in a Single Pane of Glass

Why

Problem

Facilities managers don't have a way to get a single, unified, secure, remote web graphics view across a portfolio of buildings

No Centralized View Across Sites: In-building BMS Supervisors provide web graphics views that are limited to monitoring, navigation, and basic control of devices only in a specific building or site. Building engineers and facilities managers have to cycle through multiple logins to get a complete picture across the portfolio

Solution

Neeve offers an anywhere, anytime web graphics access across a portfolio of buildings/sites, within a single pane of glass
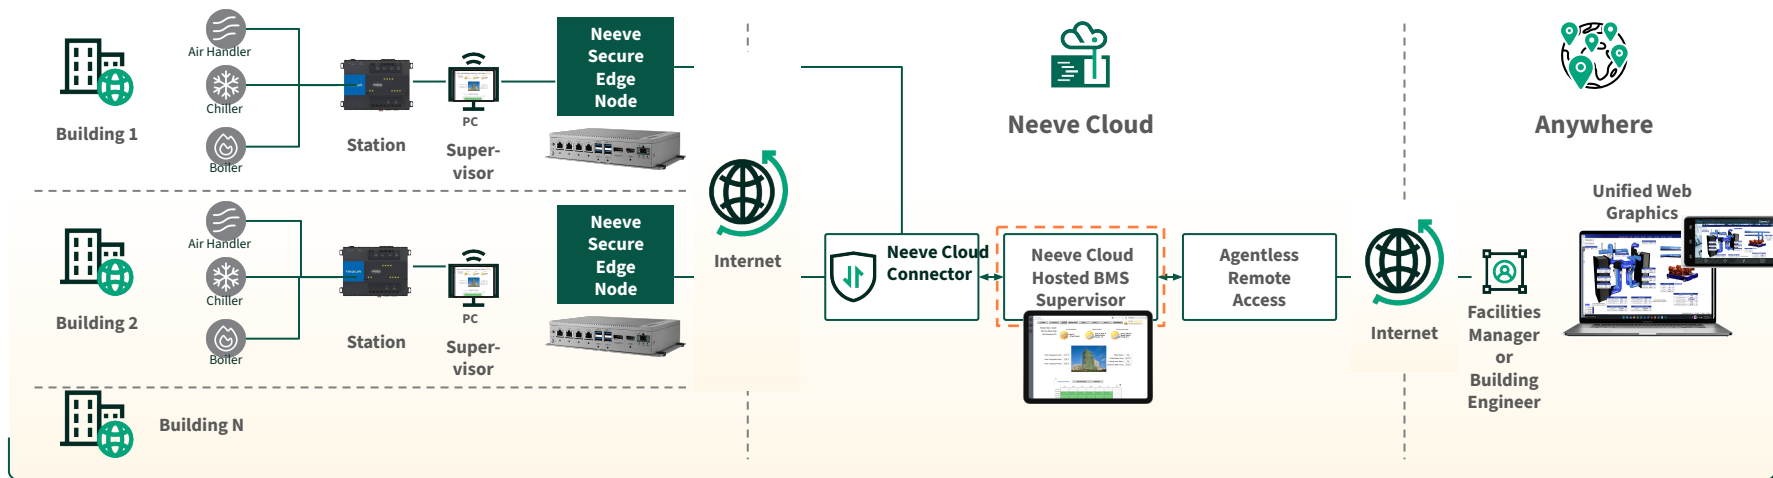

Streamlined navigation across multiple stations and sites for easier monitoring and control

Centralized updates reduce errors and effort

Integrated data for better analysis and insights

Cloud hosted Supervisor as a managed service, no additional administrative effort

How It Works: Unified Graphics with BMS Supervisor of Supervisors

Unified Web Graphics

Benefits

1 **Unified Web Graphics** access across a portfolio of buildings/sites, within a single pane of glass

2 **Streamlined navigation** across multiple stations and sites for easier monitoring and control

3 **Cloud hosted Master** Supervisor as a managed service, no additional administrative effort, hardware costs, can scale across dozens of sites
